

I have been an XM subscriber for a couple years and have 2 cars with a portable XM receiver. The ability of having an instant traffic and weather service would help out a TON !! My car already has a button built into the radio that says "Traffic" but when you push it, nothing happens. If I knew I could use this service, my life would be a ton better. Now that I have XM, I never listen to my local stations. Most of the time the signal is so weak because of the valleys and hills here, I can only depend on XM for any type of radio service. XM Radio has demonstrated to me that they are a very dependable service that should have the opportunity of delivering traffic and weather services. I strongly oppose HR 4026.
